

# Import Page Layout

PageCloud launched in late 2015 with a unique feature called "Import Page Layout". This tool allowed a user to import the layout of any page on the web and use it as the starting point for their design.

Over the past few years, PageCloud has had undergone several app improvements (such as [Sections](#)) that are not compatible with Import Page Layout.

As such, the new and improved PageCloud Editor no longer supports Import Page Layout.

We continue to review customer feedback and explore possibilities for features in the future.
