

Group content - Manual Groups

Group content in Manual Groups to allow the freeform layout of different objects. Content in groups behave as a single object.

Take advantage of [Auto Groups](#) to achieve more structured groups. Objects within an Auto Group are aligned together and spaced out evenly. Auto Groups can be moved and resized as a single object with the objects inside the Auto Group adjusting dynamically.

Group Objects in Manual Group

1. Select the images/text you want grouped by holding "CTRL" (for Windows) or "CMD" (for Mac).
2. Go to the "Arrange" tab within the Editing Menu.
3. In the Editing Menu, click "Group".
4. Once grouped, PageCloud treats them as a single object and you can drag and resize them as a group.
5. Click "Save" and "View Live" to see your new group.

Need to edit an object inside the group? Click once on the group to select it, and then double click again to select one of its objects. When you click away from the group or hit escape, the group closes and your edit is complete.

Ungroup Objects

1. Select the group you'd like to ungroup.
 2. Go to the "Arrange" tab in the Editing Menu.
 3. Click "Ungroup".
 4. Click "Save" and "View Live" to see your changes.
