

Move all objects up & down the page with squeegee (Manual column only)

The Squeegee tool allows you to move all objects below a horizontal plane up or down the page to create or remove space.

The Squeegee Tool is only available in [Manual Column Layouts](#). When using [Auto Column Layouts](#), use the [Space Below](#) tool to add space between content.

Using the Squeegee tool

1. Select an object.
2. Click on the Squeegee icon on the upper left of the object's wireframe.
3. Drag up or down to create or close space.

You can also move any objects that intersect with the horizontal Squeegee line. Hold Option (for Mac) or Alt (for Windows) and drag the Squeegee tool.

Double click the Squeegee icon to select all objects below that point.
