Use NameSilo to Connect a Custom Domain to your Site

NameSilo is a popular domain registrar where you can purchase a custom domain for your PageCloud site.

Add NameSilo to your Site

1. Login into your NameSilo account and click "Manage My Domains".
2. Click on the blue world logo within the options tab to modify the DNS settings.
3. Scroll down to the list of Templates and find the one for 'PageCloud'.
4. Click 'Apply Template' and a confirmation page will appear showing what settings will be changed.
5. The DNS Settings should include all 3 of these records:

   Record 1:
   Record Type: A-Record
   Name: @
   Value: 52.21.96.107
   TTL: Automatic, or 1 Hour

   Record 2:
   Record Type: A-Record
   Name: @
   Value: 52.3.106.31
   TTL: Automatic, or 1 Hour

   Record 3:
   Record Type: CNAME
   Name: WWW
   Value: proxy2.pagecloud.com
   TTL: Automatic, or 1 Hour

   Ensure all three of the above records are added to your domain registrar.
6. Click 'Accept'.

7. Head to your PageCloud Site Settings.
8. Connect your domain by updating the Custom Domain field.

Once both of these steps are done, you will just need to wait for your DNS settings to propagate around the world. This process can typically take around 2 hours, but it might take up to 48 hours for your changes to be active.
