

PageCloud Change Log

Forms - Inbox (Open Beta)

New

Philip, Director of Growth

Inbox gives you the ability to view and manage your PageCloud Form submissions. With Inbox, you can:

- Reply to submissions directly through the app
- Track individual form performance
- Mark unwanted submissions as SPAM
- Export form submissions (CSV, XLS, XLSX)

Note: To name or rename a form - select any form within the PageCloud Editor and click on "EDIT SETTINGS".

As always, we appreciate your feedback! 😊

Various app improvements

Improvement

Philip, Director of Growth

The following enhancements have recently been released:

- New interface for previews
- Site filtering in dashboard: ALL, DRAFT, PUBLISHED

- Customize the number of lines for text-areas in PageCloud Forms
- Increased save speed and better font handling thanks to improvement in front loading API
- Ability to edit your site or blog immediately after save

Various bug fixes

Fix

Philip, Director of Growth

The following bugs and race conditions have recently been fixed:

- Groups can't be nudged with arrow keys
- Ungrouping loses mobile positioning
- Save condition causing navigation to wrap onto multiple lines (desktop)
- Updating Google Analytics with open editor session breaks tracking for that page
- Text display issues caused by zero width joiners being added to unsupported fonts

Draft sites

New

Philip, Director of Growth

This feature gives PageCloud customers* the ability to create additional sites without having to pay until the website is published.

Draft sites can help when you are:

- Creating mockups for potential clients
- In the building phase of a new website project
- Trying out new PageCloud templates or features
- Rebuilding or refreshing your website design

To create a new draft site, click on **CREATE NEW SITE** from [your dashboard](#).

Questions? Feedback?

Let us know! 😊

*Requires one active PageCloud subscription.

New PageCloud Form Builder

New

Philip, Director of Growth

We are happy to announce that we've just released the first version of PageCloud's completely redesigned form builder.

Here are some of the core improvements:

- Focused editing experience with redesigned editor
- Set of pre-built forms - easy to add & customize
- Resize width to fit your design
- Add & customize a variety of field types (ex: checkbox, radio, button, dropdown, etc.)
- Reorder form fields with drag and drop
- Style changes get applied to all fields (ex: colors, fonts, borders, shadows, opacity, etc.)
- Vertical space and padding are controlled with a range slider instead of drag (to ensure consistency)
- Ability to add placeholder text
- Ability to make fields required
- Automatic email validation & Google Invisible Recaptcha to reduce SPAM

Important (1): If you want to update your existing forms to the new and improved version (optional), select a form and click on "UPDATE TO NEW FORM BUILDER". You can also delete the form and recreate it using the new form builder.

Important (2): Subsequent versions of forms will include features such as:

- Additional field types
- Ability to view/manage/export form submissions in-app
- Ability to connect to select third party tools
- Additional styling options (ex: horizontal forms)

As always, we appreciate your feedback!

Desktop > Mobile Inheritance

New

Philip, Director of Growth

From now on, mobile styles will be inherited from desktop styles, unless explicit mobile styles are applied. Resetting mobile styles will reset desktop to mobile inheritance.

Here is a video that explains how it works:

NOTE: If you update a style attribute in the mobile editor it will become independent from desktop changes.

Ex: If you change the font-family in the mobile editor, the font-family attribute will be independent from desktop.

Favicon Syncing

Fix

Philip, Director of Growth

A number of PageCloud customers were experiencing an issue where their website icon (also known as a Favicon) was reverting back to the default PageCloud logo. This bug has been resolved.

Please note that the “F+A+V” shortcut has been removed from the PageCloud editor. Moving forward, you will need to go to your **SITE SETTINGS** in order to [add or update your favicon](#).

Preferred URL

New

Philip, Director of Growth

Once your custom domain is [properly set up](#), PageCloud gives you the ability to choose your preferred URL. PageCloud will automatically redirect all relevant pages to your preferred URL.

For example: <https://pagecloud.com> will redirect to <https://www.pagecloud.com> because www.pagecloud.com is the preferred domain.

Automatic SSL

New

Philip, Director of Growth

PageCloud natively sets up an SSL certificate (HTTPS) for your custom domain when all of the records are [entered correctly](#) on your domain registrar. On top of helping your site’s SEO, Automatic SSL helps ensure your users data is always encrypted and secure.

Custom Domain Diagnostics

New

Philip, Director of Growth

PageCloud's Custom Domain Diagnostics, located in your SITE SETTINGS, helps you diagnose errors related to your custom domain setup.

If your custom domain isn't properly set up, PageCloud will display your "Actual DNS Entries" and how they compare to "Expected DNS Entries". You will also get information about how to resolve any issues that may arise.
