Signing in with your Facebook or Google Accounts - Single Sign On

PageCloud gives you the ability to sign in using your Facebook or Google accounts.

This feature is called Single Sign On.

Sign in with PageCloud using Single Sign On

1. Click "Sign in with Facebook" or "Sign in with Google" when accessing your account.

If you have used Single Sign On to create your account, you would not be able to use the Password Reset form. PageCloud cannot change the password of a Single Sign On account as this would be linked to your external account.

Even if you've already created an account with PageCloud, you can still use Single Sign On. This requires your email address to be the same on your PageCloud and Google or Facebook account.
