

# Publish your Site

When creating a new site, you can keep your work unpublished until you are ready to share it with the world.

## Publish your Site

1. From your site dashboard, Click "Publish Site" in the upper right corner of the page.
2. Select "Publish Site".
3. You may have to upgrade your account to include an additional published website.
4. Your site is now published and live on the web!

## Preview your Site

1. From your site dashboard, Click the "Preview" link in the lower left of the page thumbnail.
2. This will open up a preview of your site. This preview is only visible by you and will not appear online.

## Unpublish your Site

1. From your site dashboard, Click the "Site Settings" tab.
2. Head to the "Domain" section within the "General Settings" tab.
3. Click **Unpublish Site**
4. Your site is no longer accessible on the web.

When your site is in an unpublished state, a 404 Page Not Found message will appear at your site's address.

Unpublishing a site does not reduce your subscription quantity of available sites. To Reduce the amount of sites on your subscription reach out to support through live chat or at [support@pagecloud.com](mailto:support@pagecloud.com).
