

Add Color Tint to an Image

Adding a color tint to an image can help make a number of different images feel similar across your website. It can also be useful when trying to have text and call-to-actions more visible when they are on top of images.

Add Color Tint to an Image

1. Select an image
2. Head to "Style" tab within the [editing menu](#).
3. Select "Color Tint" and adjust the color to match your style.

Remove Color Tint from an Image

1. Select the image that has color tint
 2. Head to "Style" tab within the editing menu.
 3. Select "Color Tint" and select the clear icon. This is the white circle with red diagonal line through it.
