Changing your Preferred Domain

A preferred domain is the version of your domain that you would like your visitors to land on.

i.e www.example.com and example.com are two different versions of your domain. Setting the preferred domain to www.example.com will ensure all traffic from both example.com and www.example.com will go to www.example.com.

Changing your Preferred Domain

1. Click on the **Domain** tab under settings in the left toolbar of your dashboard

2. Look for the section **Choose your Preferred URL**. This is how you would like your website to appear online. Some people prefer to have www and others don't, the choice is yours. Choose which you would prefer and click the **Update** button to save.

If you have setup your domain with Cloudflare this option will not be available in Pagecloud you will need to configure it in Cloudflare.
