

Password protect a page

You can add a password to a page to help restrict who can see the content.

Set a Page Password

1. Head to your Dashboard.
2. Click into the site and select the "Pages" tab to show all pages.
3. Click on the arrow at the bottom right of the page you would like to password protect.
4. Select Password Protect.
5. You can keep the auto-generated password for the page, or set up a custom one.
6. Click Update Password to set a new password.

Remember your password as it will be encrypted for your protection. Once saved, you will no longer have the ability to read or copy it

When entering in a password for a page, the UserName field can be left empty. This is a browser provided field that is not required for password protected pages.

The Home page of a site cannot be password protected.

Update or Remove a Page Password

1. Head to your Dashboard.
2. Click into the site and select the "Pages" tab to show all pages.
3. Click on the arrow at the bottom right of the page you would like to update the password of.

4. Select Update Password.
5. On the password page, select Clear to clear out the old password, and enter in a new one.
6. Click the blue toggle to remove the password from the page.

When a page is set to Password Protected you will see a badge in the page thumbnail while viewing your Pages Dashboard.
