

How to multi-select objects

Selecting multiple objects are one is easy in Pagecloud. This is a great way to apply formatting, styles, layouts, links and other attributes and behaviours to many objects.

Here are the various ways you can select objects:

Marquee Selection

Think of drawing a box over top of all the objects you would like to select. Put your mouse cursor where you want to start and press and hold mouse button then drag to create a box over all the objects you want to select. When you are at the end release the mouse button. The objects within the selection you created are now selected.

Shift + Click

Hold down the **Shift** key on your keyboard and click the objects you want to select. While still holding **Shift** you can click selected objects to de-select them.

Tip: You can marquee select a number of objects, then add additional objects to the selection by using the keyboard and click method.

Select All objects in a section

To select all objects in a section you can use the **CMD** (Mac) or **CTRL** (Windows) + **A** to select all.

Tip: You can use **Shift** + **Click** to de-select objects.
