

Set HTML Language for a page

You can set the HTML Language tag for your pages to help search engines better understand the language content on the page.

Set a page's HTML language

1. Click on the [Left Side Bar](#).
2. Click on "Settings". This will open the Page Settings.
3. Scroll down the General Settings tab to the SEO Section.
4. Select the HTML Language for the page. This should be based on the primary language of the content that appears on the page.
5. Click "Save" to save your page.

New pages added to a site will default to an English-EN language tag.
