Group objects together

Grouping objects together allow you to quickly move a number of objects as if they were a single object.

PageCloud provides two methods to group objects:

Manual Groups - Grouping objects with a Manual Group allows the objects to be positioned freely. Manual Groups are great when you want you can overlap, offset, and arrange objects without a defined structure. Learn more about Manual Groups.

Auto Groups - Auto Groups allow all objects within the group to have their position and spacing aligned. Auto Groups are great when you are grouping similar objects that you would like to have consistent position and alignment, such as a collection of social media icons. Learn more about Auto Groups.
