# Import Customer List

Importing customers

There is easy way to migrate your customer base to your store. You can do so with the help of the free **Import Customers** app from the App Market:

1. Install the Import Customers app in your store's account:

2. Download the template of CSV import file.
3. Using the template, create import file with your customers data in a text editor, for ex. Excel or OpenOffice.
4. Upload the file to the app and it will automatically create new customers in your store account.
5. You can leave "password" column empty. In this case we will generate a random password for each customer.

You'll find the installed app in your **store's admin → My sales → Import Customers** page.
